

Orion Shared Care Tool: System updates

From 7/08/2018, some tab names will change and bugs be fixed

- For GPs, the Workflow Tasks tab will be renamed to “Consent and Care Team Invites”.
- For all users, Assessments will be removed from the Workflow Summary tab and added to its own tab “Assessments”.
- For all users, Workflow Summary tab will be renamed Patient Services and Legal Docs.
- For all users, Goals and Actions will appear in their own tab.
- For GPs, some EMR Connect bugs will be fixed and minor enhancements made.

This upgrade will:

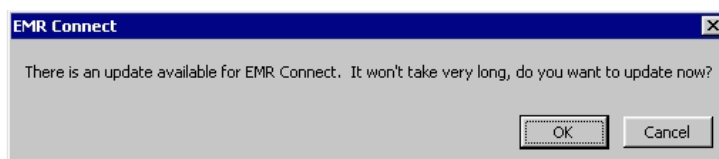

- The system more usable by making important health information easier to find. For GPs, consent and care team invites are much easier to find. These changes are thanks to clinician feedback.

What users will need to do

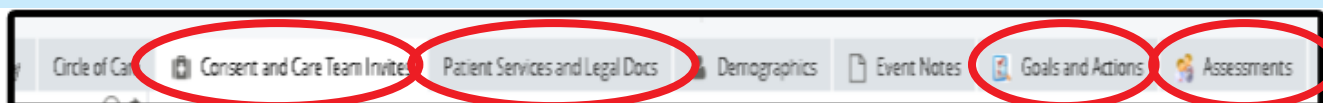

GPs will need to update EMR Connect (details below). Other users do not need to do anything except note these changes.

Steps for GP update of EMR Connect:

- EMR Connect needs to be upgraded. The next time you login to EMR Connect you will receive a notification to download the newest version (as shown below).
- Once you download the update and log back in to EMR Connect, the EMR Data Connector component will automatically install in the background.
- Once these have been completed, you’ll then be able to upload existing Care Plans to Orion for existing patients.

The New Tabs and Tab Names

“Workflow Tasks” is renamed “Care Team Invites and Consent”

“Workflow Summary” is renamed “Patient Services and Legal Docs”

Goal and Actions and Assessments are in individual tabs
