

Below is a QRG for GPs using EMR Connect. Each Lane is a decision or action.

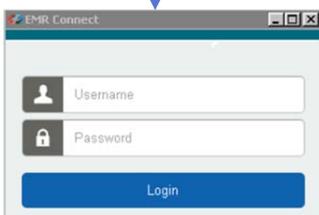

**1. Decision to use Orion Shared Care Tool.**

Open Patient in Best Practice or Medical Director Programs

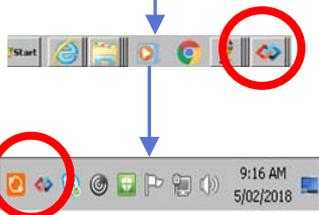

Ensure EMR data connector is active on desktop. Click EMR Connect from Windows Menu.

Login to EMR Connect with your Username (Firstname.Lastname,) and password

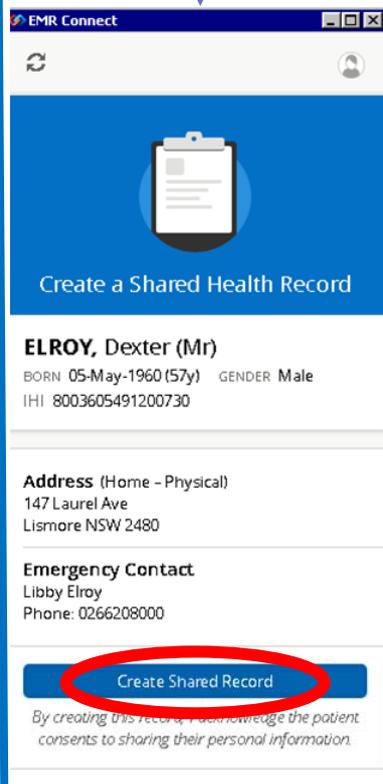

**NB:** EMR Connect can stay open and be accessed from the Taskbar or Toolbar.

**2. Gain patient verbal consent and enrol patient in Orion Shared Care Tool.**

If the patient does not already have a Shared Health Record you will be prompted to create one.

Click the 'Create Shared Record' Button.

**NB:** GP centre must be My Health Record approved and have Individual Health Identifier stored in GP CIS. If no IHI available, error message will appear.

**3. Updating patient information in the Orion Shared Care Tool**

Ensure information is updated first in Best Practice or Medical Director for sharing of information in Orion

From the "Step 1" tab, Use tick boxes to select Conditions, Allergies and Procedures for upload.

Conditions and Procedures can be filtered for confidential and inactive.

Once details are ticked, click the 'Update' button in each relevant field.

To remove a Condition, Allergy or Procedure from the portal view, untick the required box and click "Update".

From the Step 2 tab, enrol the patient in the "Shared Care" workflow by pressing the small plus button

**NB:** The above process can be used for Current Medication, Prescription History & Care Plan Upload. Separate QRGs exist relating to Medication Uploads and Care Plan Upload with EMRC.

Once upload complete this information is viewable on the Shared Care Portal to all care team members for a patient.
